TOTAL POINTS 3

1. Fill in the blank: Internet search engines are an everyday example of how Boolean operators are used. The Boolean operator ____ expands the number of results when used in a keyword search.

1 / 1 point

- ☐ WITH
- ☐ NOT
- ☐ AND
- ☒ OR

Correct

The Boolean operator OR expands the number of results when used in a keyword search.

2. Which of the following statements accurately describes a key difference between wide and long data?

1 / 1 point

- ☐ Wide data subjects can have multiple rows that hold the values of subject attributes. Long data subjects can have data in multiple columns.
- ☐ Every wide data subject has a single column that holds the values of subject attributes. Every long data subject has multiple columns.
- ☐ Every wide data subject has multiple columns. Every long data subject has data in a single column.
- ☒ Wide data subjects can have data in multiple columns. Long data subjects can have multiple rows that hold the values of subject attributes.

Correct

Wide data subjects can have data in multiple columns. Long data subjects can have multiple rows that hold the values of subject attributes.

3. What does data transformation enable data analysts to accomplish?

1 / 1 point

- ☐ Retrieve the data faster
- ☒ Change the structure of the data
- ☐ Restore the data after it has been lost
- ☐ Inspect the data for accuracy

Correct

Data transformation enables data analysts to change the structure of data.
