## Test your knowledge on using SQL with temporary tables

TOTAL POINTS 3

1. When are temporary tables automatically deleted?

1 / 1 point

- ☐ After running a query in your SQL database
- ☐ After completing all calculations in the table
- ☒ After ending the session in a SQL database
- ☐ After running a report from the table

**Correct**

Temporary tables are automatically deleted after ending the session in a SQL database.

2. The following SQL query contains information about bike trips:

1 / 1 point

```
WITH 1_hr_trips AS (  
  SELECT *  
  FROM bigquery-public-data.new_york.citibike_trips  
  WHERE tripduration = 60  
)
```

What data will appear in the temporary table created through this query?

- ☐ The total number of bike trips
- ☐ Bike trips equal to or more than one hour
- ☐ A random subset of bike trips
- ☒ Bike trips that lasted exactly 60 minutes

**Correct**

This temporary table will show bike trips that lasted exactly 60 minutes. The name of the table is "1\_hr\_trips" and the query includes the condition that trips in the table equal one hour.

3. What benefit does a CREATE TABLE statement add to a temporary table?

1 / 1 point

- ☐ Specific naming conventions
- ☐ Metadata about the data in the table
- ☐ Automated calculations
- ☒ Access for anyone to use the table

**Correct**

A CREATE TABLE statement provides access for anyone to use the temporary table. The SELECT INTO statement is better suited for one person.
