## Test your knowledge on combining multiple datasets

TOTAL POINTS 3

1. Fill in the blank: In SQL, \_\_\_\_ can be used to combine strings from multiple tables in order to create a new string.

1 / 1 point

- ☒ CONCAT
- ☐ CONCATENATE
- ☐ CONNECT
- ☐ COMBINE

✓ **Correct**

In SQL, CONCAT can be used to combine strings from multiple tables in order to create a new string.

2. You are working with a database table that contains data about playlists for different types of digital media. You are only interested in the first 4 playlists.

1 / 1 point

You write the SQL query below. Add a LIMIT clause that will return only the first 4 playlists.

```
1 SELECT
2 *
3 FROM
4 playlist
5 LIMIT 4;
```

Run

Reset

playlist_id	name
1	Music
2	Movies
3	TV Shows
4	Audiobooks

What playlist appears in row 2 of your query result?

- ☐ Audiobooks
- ☐ TV Shows
- ☐ Music
- ☒ Movies

✓ **Correct**

The clause **LIMIT 4** will return only the first 4 playlists. The complete query is **SELECT \* FROM playlist LIMIT 4**. The LIMIT clause sets a limit on the number of rows your query returns.

The Movies playlist appears in row 2 of your query result.

3. What function can be used to confirm that spreadsheet cell B8 contains exactly 20 characters?

1 / 1 point

- ☐ LEN = B8,20
- ☒ =LEN(B8)
- ☐ LEN = B8
- ☐ =LEN(20)

✓ **Correct**

The function =LEN(B8) will display the number of characters in cell B8. The LEN function returns the length of a string of text by counting the number of characters it contains.
