Overview

Like many other areas of machine learning research, reinforcement learning (RL) is evolving at breakneck speed. Just as they have done in other research areas, researchers are leveraging deep learning to achieve state-of-the-art results.

In particular, reinforcement learning has significantly outperformed prior ML techniques in game playing, reaching human-level and even world-best performance on Atari, beating the human Go champion, and is showing promising results in more difficult games like Starcraft II.

In this lab, you will learn the basics of reinforcement learning by building a simple game, which has been modeled off of a sample provided by [OpenAI Gym](#).

Objectives

In this lab, you will:

- Create an AI Platform Tensorflow Notebook.
- Clone the sample repository from the training data analyst repo found on Github.
- Read, understand, and run the steps found in the notebook.

Once you're ready, scroll down and follow the steps below to get your lab environment set up.

Set up your environment

For each lab, you get a new Google Cloud project and set of resources for a fixed time at no cost.

1. Make sure you signed into Qwiklabs using an **incognito window**.
2. Note the lab's access time (for example, **02:00:00** and make sure you can finish in that time block.

There is no pause feature. You can restart if needed, but you have to start at the beginning.

3. When ready, click

START LAB

4. Note your lab credentials. You will use them to sign in to the Google Cloud Console.

[Open Google Console](#)

Caution: When you are in the console, do not deviate from the lab instructions. Doing so may cause your

account to be blocked. [Learn more.](#)

Username

[New to labs? View our introductory video!](#)

5. Click **Open Google Console**.

6. Click **Use another account** and copy/paste credentials for **this** lab into the prompts.

If you use other credentials, you'll get errors or **incur charges**.

7. Accept the terms and skip the recovery resource page.

Do not click **End Lab** unless you are finished with the lab or want to restart it.
This clears your work and removes the project.

Launch AI Platform Notebooks

To launch AI Platform Notebooks:

Step 1

Click on the **Navigation Menu**. Navigate to **AI Platform**, then to **Notebooks**.

Models

Step 2

On the Notebook instances page, click **+ NEW INSTANCE**. Select the latest version of TensorFlow Enterprise 2.x. *Without GPUs*.

In the pop-up, confirm the name of the deep learning VM, move to the bottom of the window and click **Create**.

New notebook instance

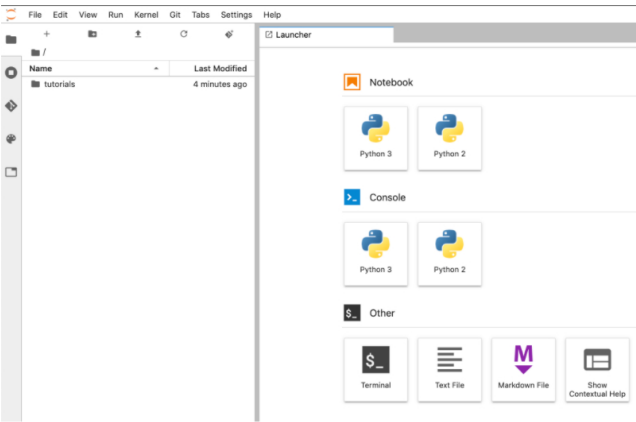

Instance name tensorflow-2-3-20200904-171301
 Lowercase letters, digits, or '-' only. Must start with a letter. Cannot end with a '-'.
 Region * **us-west1 (Oregon)** Zone * **us-west1-b**
 Environment TensorFlow 2.3 (with Intel® MKL-DNN/MKL)
 Machine type 4 vCPUs, 15 GB RAM
 Boot disk 100 GB Disk
 Subnetwork default(10.138.0.0/20)
 External IP Ephemeral(Automatic)
 Extensions **SELECT EXTENSIONS** None selected
 Permission Compute Engine default service account
 Estimated cost \$99.89 monthly, \$0.137 hourly

CUSTOMIZE **CANCEL** **CREATE**

The new VM will take 2-3 minutes to start.

Step 3

Click **Open JupyterLab**. A JupyterLab window will open in a new tab.

Clone course repo within your AI Platform Notebooks instance

To clone the `training-data-analyst` notebook in your JupyterLab instance:

Step 1

In JupyterLab, click the **Terminal** icon to open a new terminal.

Notebook

Console

Other

Step 2

At the command-line prompt, type in the following command and press **Enter**.

```
git clone https://github.com/GoogleCloudPlatform/training-data-analyst
```

Step 3

Confirm that you have cloned the repository by double clicking on the `training-data-analyst` directory and ensuring that you can see its contents. The files for all the Jupyter notebook-based labs throughout this course are available in this directory.

/ training-data-analyst /

	README.md	a minute ago

Run Through the Notebook

Step 1

From the left-hand menu, select **training-data-analyst > quests > rl > early_rl > early_rl.ipynb**. This will open a new tab.

Step 2

Ensure you're using the Python 3 kernel by selecting `Python 3` from the upper right corner of the notebook.

Step 3

Read through the notebook's contents and run all code blocks with **Shift + Enter**. Return here after you have completed the instructions in the notebook.

End your lab

When you have completed your lab, click **End Lab**. Qwiklabs removes the resources you've used and cleans the account for you.

You will be given an opportunity to rate the lab experience. Select the applicable number of stars, type a comment, and then click **Submit**.

The number of stars indicates the following:

- 1 star = Very dissatisfied
- 2 stars = Dissatisfied
- 3 stars = Neutral
- 4 stars = Satisfied
- 5 stars = Very satisfied

You can close the dialog box if you don't want to provide feedback.

For feedback, suggestions, or corrections, please use the **Support** tab.
