Online Inference

Total points 3

1. What are the main features of prediction from online inference? (Select all that apply)

1 / 1 point

☒ They are generated in real-time upon request.

✔ **Correct**
Excellent!

☒ They are based on a single data observation at runtime.

✔ **Correct**
That's right!

☒ They can be made at any time of the day on demand.

✔ **Correct**
Correct!

☐ They are produced for all the data points at once.

2. In which area of online inference is a model artifact and model run created to reduce memory consumption and latency?

1 / 1 point

☐ Model Architecture

☐ Infrastructure

☒ Model Compilation

✔ **Correct**
That's right! Model Compilation are running instances of the model responsible for performing the actual inference. Thus, multiple workers can run simultaneously on Torch Serve.

3. True or False: Fast data caching using NoSQL databases is a cheap way of optimizing inference.

1 / 1 point

☒ False

☐ True

✔ **Correct**
Yes!
